

Q&A Session-> Online Webinar, 03.02.2021

Module II – Low code/No code platform fundamentals

<p>In Power BI - is it possible to the Power query connections from another Excel file, without generating table in Excel? When I select GET DATA -> EXCEL => it does not recognize that in Excel is some Power query connections.</p>	<p>Here you can get acquainted with the possibilities https://docs.microsoft.com/en-us/power-bi/connect-data/service-excel-workbook-files</p>
<p>Hello! Is it possible to ask questions outside of this session, for example by calling?</p>	<p>You can always reach out to us by sending an e-mail to skills@lu.lv or you can join our community group to find an answer. Feel free to join in our Discord Group to find your learning buddies: https://discord.gg/cuFq48BNeA</p>
<p>Is there a place to watch the previous webinars?</p>	<p>You can watch all the previous webinar videos on the e-learning platform https://edu.lu.lv/course/index.php?categoryid=253 with the guest password: it2021</p>
<p>In power apps studio don't work formulas that is shown in learning course. Why?</p>	<p>It might be distinct reasons. But all formulas listed on a webpage below suppose to work. It might be issue with other related formulas in other place or data sources or variables. Some troubleshooting is needed to understand root cause.</p> <p>https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/formula-reference</p>
<p>My Power apps studio is in Latvian, but course in English. Where can I change language?"</p>	<p>To change the language: 1) open this link: https://web.powerapps.com?l=en-US 2) or you need to change the language in Chrome (or another web browser) settings.</p>
<p>I have tried to create test environment and got license warning. ""The user does not have a license that allows environment creation. Request ID"</p> <p>I have same problem. I have tried to create test environment and got license warning. ""The user does not have a license that allows environment creation. Request ID"</p>	<p>Looks like you need to get the Power Apps trial version. Each user can create up to two Trial environments.</p> <p>Here is link to get the trial version of Power Apps: https://powerapps.microsoft.com/en-us/</p> <p>Here you will find information on how to create test environment: About trial environments - Power Platform Microsoft Docs</p>
<p>In Block3-5 ""Manage Datasets "" I cannot connect to localhost\SQLEXPRESS, as from PC as from VM, why?</p>	<p>Šis par Edgara kursu</p>
<p>How much does Power Apps premium+ cost?</p>	<p>Please check more details on pricing https://powerapps.microsoft.com/en-us/pricing/</p> <p>But You do not need Premium for these courses 😊</p> <p>It's also possible to get a Power Apps Community plan for development purpose: https://powerapps.microsoft.com/en-us/communityplan/</p>
<p>Can you put a Power Apps free trial link here, please?</p>	<p>https://powerbi.microsoft.com/en-us/</p>

	<p>Instruction here: https://onedrive.live.com/?authkey=%21ANi7EGMRJa3tzWk&cid=FBB64CACFFC4DEA6&id=FBB64CACFFC4DEA6%21320205&parId=FBB64CACFFC4DEA6%21320197&o=OneUp</p> <p>It's also possible to get a Power Apps Community plan for development purpose: https://powerapps.microsoft.com/en-us/communityplan/</p>
<p>Which design do I use, when I get data from API,s ?</p>	<p>If it's question about which type of app to choose Canvas or Model-Driven, then Canvas App as it can connect to many different Data sources.</p> <p>If your APIs don't have a Connector: https://docs.microsoft.com/en-us/connectors/connector-reference/</p> <p>Then you can create your own custom connector: https://docs.microsoft.com/en-us/connectors/custom-connectors/</p>
<p>Where can I find all presentations and video records?</p>	<p>You can watch all the previous webinar videos on the e-learning platform https://edu.lu.lv/course/index.php?categoryid=253 with the guest password: it2021</p>
<p>Do we have any option to get private consultations?</p>	<p>Private consultations are not planned within this program, but you can always reach out to us by sending an e-mail to skills@lu.lv or you can join our community group to find an answer. Feel free to join our Discord Group to find your learning buddies: https://discord.gg/cuFq48BNeA</p>
<p>If I want to continue to use my apps, If I well understood, I need to buy the license, after Trial period. How much does it cost?</p>	<p>If you want to continue using your Apps, yes, you will need to buy license after trial period. Please find more details on pricing https://powerapps.microsoft.com/en-us/pricing/</p> <p>But if you want to keep developing apps, you can get Community plan: https://powerapps.microsoft.com/en-us/communityplan/</p>
<p>when you have created this app and someone have used it, let's say, ordered something - there this info goes? and how can I gather this info?"</p>	<p>If you enter, change, or delete information in your app, any corrections are automatically made to the tables associated with the app. You can access and collect data:</p> <ol style="list-style-type: none"> 1) opening tables in make.powerapps.com 2) via Power BI 3) Creating new screens through Power Apps. 4) you can export data to Excel (through Model-driven App or make.powerapps.com) 5) you can access it via oData APIs (which are automatically generated for Dataverse environments)
<p>What is programing language in power apps?</p>	<p>It is not a specific formula language, just a PowerApps unique formula language.</p>
<p>Can I connect PowerApps to an outside CRM app?</p>	<p>Yes, all connections are possible. If it's Microsoft Dynamics CRM, then all data in in Dataverse and you can</p>

connect either directly (Model-Driven App) or through Dataverse Connector (Canvas App).

If it's other CRM application: Check first if there are a connector ready for it? <https://docs.microsoft.com/en-us/connectors/connector-reference/>

I not then you can create your own custom connector: <https://docs.microsoft.com/en-us/connectors/custom-connectors/>

If your CRM system is not exposed to the cloud, then you can use Data Gateway and connect your Canvas app to on-premise CRM Database: <https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/gateway-reference>

My tables in PowerApps are in Lithuanian how can change to English?

To change the language:

- 1) open this link: <https://web.powerapps.com?!=en-US>
- 2) Or you need to change the language in Chrome (or another web browser) settings.

Is there a possibility too see table relations here? (How your chosen data tables are connected to each other, or how all of the tables in your data sources are connected with each other)

You can see relationships here:

Here is more information:

<https://docs.microsoft.com/en-us/powerapps/maker/data-platform/data-platform-entity-lookup>

<https://docs.microsoft.com/en-us/learn/modules/get-started-with-powerapps-common-data-service/>

There is no way to see relationships between more than 2 tables with Out of the box tools, but it's possible to do that with Community Tool XRMToolbox and ER Diagram Plugin - <https://www.xrmtoolbox.com/plugins/JourneyIntoCRM.XrmToolbox.ERDPlugin/>

You no need to create relationships between tables in PowerApps?

If data in one table often relates to data in another table then you need to create relationships. Here is more information: <https://docs.microsoft.com/en-us/powerapps/maker/data-platform/data-platform-entity-lookup>

	<p>https://docs.microsoft.com/en-us/learn/modules/get-started-with-powerapps-common-data-service/</p> <p>Relationships are used if you are using Dataverse or SQL Server, If you use SharePoint List or Excel as data source, then there are no relationships</p>
This is really cool. I could be easy making an app for my company event's program and connect it to a ticket purchasing platform.	Thank you for your feedback 😊
I am happy for people who understand this. Looks like I need to re-read all subcategories for this course	If you continue learning path, you will get there, trust us 😊 Keep the good path!
Have no idea what is going on...I am in those 'lost' one's wagon, will probably need to re-watch "	We do encourage review videos and recordings on the e-learning platform https://edu.lu.lv/course/index.php?categoryid=253 with the password it2021 and continue study learning materials and we trust you will get there!
It looks really nice set of tools, but usable only in case if you have access to good, structured data.	To get a quality result, the data must be properly structured. You can do it!
I am not able to enter either Power BI nor Power Apps trials from Mac.	Power BI is a powerful BI tool, but it sadly doesn't support Mac devices. Power Apps creation works in Browser so it does not depend on Operating system. App itself can be launched in Browser as well or through Power Apps App on iOS or Android devices.
Take photo function -> is it possible to change like take a screenshot? Or paste picture?	<p>Yep, for screenshot you would need to use a custom control from community: https://pcf.gallery/screenshot-pcf/ https://www.agarwalritika.com/post/pcf-to-directly-email-a-screenshot-from-a-canvas-app</p> <p>Pasting an image is not supported, but you can use a "Add Picture" control</p>
Is there any term base used in Power Apps? I did not find anything like that in https://docs.microsoft.com/en-us/powerapps/ It's easy to get lost in these terms used - DataVerse, Data source, dataset, flow, assignee, table, dashboard, report, and etc.	Follow the learning scenario and you will learn new terms step by step.
Will there be any practical tasks like this in the final test? Or more theoretical questions?	There will be only theory questions in the test. It will not include practical exercises.
Will the test on 10th of March include practical (creating app etc.)?	There will be only theory questions in the test. It will not include practical exercises.
Could you advice in which cases it would be better to choose Modal-Driven Apps and in	Added a comparison table below this one

which cases a Canvas app? Would be great to know.	
In formula You don't need to mention the table name when adding for example filter? So the relationship between the tables will find the query target?	<p>You have to define a Table from which you'll be filtering: https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/functions/function-filter-lookup</p> <p>If one of the columns is a "Lookup" (a reference to another Table), then you can reference it by dot "." Operator, without defining another table. But this is about filtering criteria in columns.</p>
Will theoretical questions be with optional answers (test)?	We can't say that yet. There are likely to be both multiple-choice and non-multiple-choice questions.
I feel like - I want learn to drive with bike, but you are teaching me to fly with plane :)"	Don't be afraid! The higher the goal, the greater the chance to reach the sky!
It looks like in a canvas app you need to do more programming codes. :)	<p>Not always, it's up to you.</p> <p>Practically yes. Especially when it comes to layout, user interface. In Model-driven Apps you get it with Drag and drop approach and you can't control, positions, sizes, colors, fonts, windows, pop-ups, etc. In Canvas apps you have to set those parameters yourself and control it either with static values or formulas (ala. Coding). Of course, it's always good to start from template in Canvas app to get initial structure and then modify it. But all elements how to go to other screen and get back, how to load and save data you have to think yourself and write few formulas for it.</p>
Where can I find some library with actions and codes to do this coding?	<p>All available formulas are defined here: https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/functions/function-filter-lookup</p>
How to get dataverse_Test environment?	<p>Dataverse_Test was a name I gave to one of Environments in my test Tennant. I wanted to emphasize that environment has Dataverse in side (as it could be without it).</p> <p>Here is link to get the trial version of Power Apps: https://powerapps.microsoft.com/en-us/</p> <p>Here you will find information on how to create test environment: About trial environments - Power Platform Microsoft Docs</p>
How many participants are from Latvia?	There are around 2150 registered participants in Latvia in this module
So it's basically like a CSS formatting for making filters?	Not sure if I got question right, but neither in Model-driven nor Canvas apps we do not modify CSS directly
How can I make the app so that this inventory can count itself from the picture the quantity of the barcode? I mean how much items with this barcode is in the picture	<p>Theoretically it could be possible by using AI Builder functionality: https://docs.microsoft.com/en-us/powerapps/use-ai-builder. But you would need to create a Model and train it with big set of pictures and of course your objects would need to be visible in a front row.</p>
canvas apps: when you build app, is there any possibility to see all the code of the app in one place? Or just on the separate objects?"	<p>There is a very new experimental way to have all source code in one place: https://powerapps.microsoft.com/en-us/blog/source-code-files-for-canvas-apps/, But the main way still is individual events of individual objects in Canvas Studio, unfortunately.</p>
