

Q&A Session-> Online Webinar, 26.01.2021

Module II – Low code/No code Program Fundamentals

<p>When it will be open and actual - can I sign up for LU certification for both courses after the official Test month (March)?</p>	<p>Unfortunately, the test will only be available on the dates specified in March. More information about the FINAL test you will receive in the e-mail you have provided, when registered.</p> <p>As for Microsoft Certification, you can sign up for exam any time. More details can be found here https://docs.microsoft.com/en-us/learn/certifications/</p>
<p>Sometimes it's difficult to follow the learning material as Microsoft is still in progress of adopting terms of Dataverse. In several places' entities are mixed with tables, fields are mixed with column</p>	<p>Entity is a logical concept, but table is physical concept. Table is used to express entity.</p> <p>More information: https://en.wikipedia.org/wiki/Entity%E2%80%93relationship_model</p> <p>Difference between a Field and a Column here: https://docs.microsoft.com/en-us/office/vba/outlook/concepts/forms/difference-between-a-field-and-a-column</p>
<p>Will the final test be online?</p>	<p>Yes. Final test will take place on e-learning platform. The same platform where all materials, schedules and recordings are stored and available for your need.</p>
<p>The modules on Microsoft Learning in reality require twice as much than mentioned in the time estimate on the module overview page. Hence, the question - anyone has a magic pill/method to double the learning speed?</p>	<p>You are right, everyone has their own learning speed. Time was calculated based on average learning speed. The good news is that you can study at any time in your spare time. Good luck</p>
<p>Hello, I've tried to perform tasks, but when connected I didn't see any environments created. When I was attempting to do any task, I was getting an error saying that I don't have a license</p>	<p>It looks like you haven't registered correctly with Microsoft. In order to use Power BI you need to use Microsoft account. Instruction is HERE.</p>
<p>Hello, where could I find a transcript of these Q&A from last seminar? "</p>	<p>https://edu.lu.lv/pluginfile.php/335839/mod_resource/content/1/FAQ_Digital_Skills_Development_Program.pdf</p>
<p>Is there more exercises in https://docs.microsoft.com/ for example adding new calculations tables, columns, adding filters etc. In a Module I: Business and Data Analysis block 4 at the moment and passed as well block 1 Module II: Low-code, no-code Programme Development"</p>	<p>Please, follow the learning scenario, which includes several examples.</p>
<p>For every webinar we have listed modules to study, but it takes a lot more time than stated in Microsoft platform to learn if we have no previous background in analytics. Spare time is a good option if you're not working full-</p>	<p>Thank you for your suggestion. We will definitely think about such a possibility.</p>

time :) but if this course is oriented to specialists/business oriented then it is a good idea to correct the time frame (maybe next time if this time is not possible to do so)."	
The optional parts (expert presentation) are not included in the question's exam i hope	Final tests will be built based only on the required sections.
I find too expensive to get data from azure ad to power bi (not possible to get directly)... is that correct that Microsoft offering in azure portfel to get visualizations from azure data, you not using power bi for that	There are built-in visualizations which can be used without additional costs, there are also custom visuals somw of them are available for additional pricing. Azure Maps visuals can use resources from your Azure account as additional feature. There are countless possibilites to connect to your Azure source for getting data.
I'm using Power BI Service and I have the paid version. I just do not understand how and if I can edit or update my data source if I have the excel file with a dynamic information in the cloud. I would like to have that dashboard dynamic and update whenever I have new data coming in to my excel.	Refresh button is there in the Home panel, though currently there is n possibility to refresh your data set automatically on your computer.
Will we be able to access learning materials after the test in March? If yes, how long for? "	In MS Learn all materials will be available all year and learning path are always up to date. But materials on the e-learning platform will be available by September
What about pagination?	Paginated reports are available for Report Server (on-prem version of Power BI) and with premium capacity.
What should I do if my table has some empty rows?	You can filter them out during data transformation phase but for aggregation you don't have to bother about them since blanks are not shown by default. If you want to remove blanks, in the Query Editor you can click the drop-down for Remove Rows in the ribbon, then click Remove Blank Rows.
Content of today's practical task seems to be the same as it was last week in Module I. What is difference between Module I and Module II?	In this module Power Bi is only one of 4 tools that you will get to know. In other module you will be focusing and learn ""deep dive"" about Power BI options
Can we export PDF data to Power BI?	You can use Get Data – PDF connector for this purpose, if data is organized in tables relevant table should be loaded, text field might need some additional transformations. https://docs.microsoft.com/en-us/power-bi/connect-data/desktop-connect-pdf
Does this program have tools to generate fake data which could be used to test, for example, MySQL databases?	MySQL database is used as a data source, so data should be there. Though with enhanced capabilities writing back possibilities might exist but not for all data sources.
Hi, i wanted to get the data from the same webpage coutrycode.org - but after adding the web page according to your instructions - it didn't give any suggested tables, only blank page. nonetheless i could see the web in html	Use Get Data – Web connector

<p>view and it offered only create table template manually. what steps were wrong? "</p>	
<p>Docs, Dacs - how it is spelled he is talking about?</p>	<p>DAX (Data Analysis Expressions) https://docs.microsoft.com/en-us/dax/</p>
<p>Do you recommend familiarizing ourselves with Python or R languages? Or is DAX totally enough to get the best out of Power BI?</p>	<p>This can provide additional tools for data analysis to run some code within Power BI for specific visualizations or analytics purposes. Operations with table fields from the model can be done exclusively with DAX. M language is used for data transformations in Power Query but most of the steps are generated automatically there.</p> <p>Python and R languages are widely used programming languages that provide much more capabilities. Using Python and R you must write a script in a programming language.</p>
<p>Could you please post the samples for learning before the practical webinar, so we could try ourselves what the instructor is saying? I think it would be more beneficial for us to try along than only listening?</p>	<p>All examples shared by Program Leader and experts are available after the webinar. We encourage to join for the webinars and then try it yourself, step by step.</p>
