

# FROM FIELD TO PLATE: DISCUSSION ON TRANSFER OF METALS IN FOOD CHAIN

*Zane Vincevica-Gaile, William Hogland,  
Mara Stapkevica, Juris Burlakovs*

University of Latvia, Latvia & Linnaeus University, Sweden

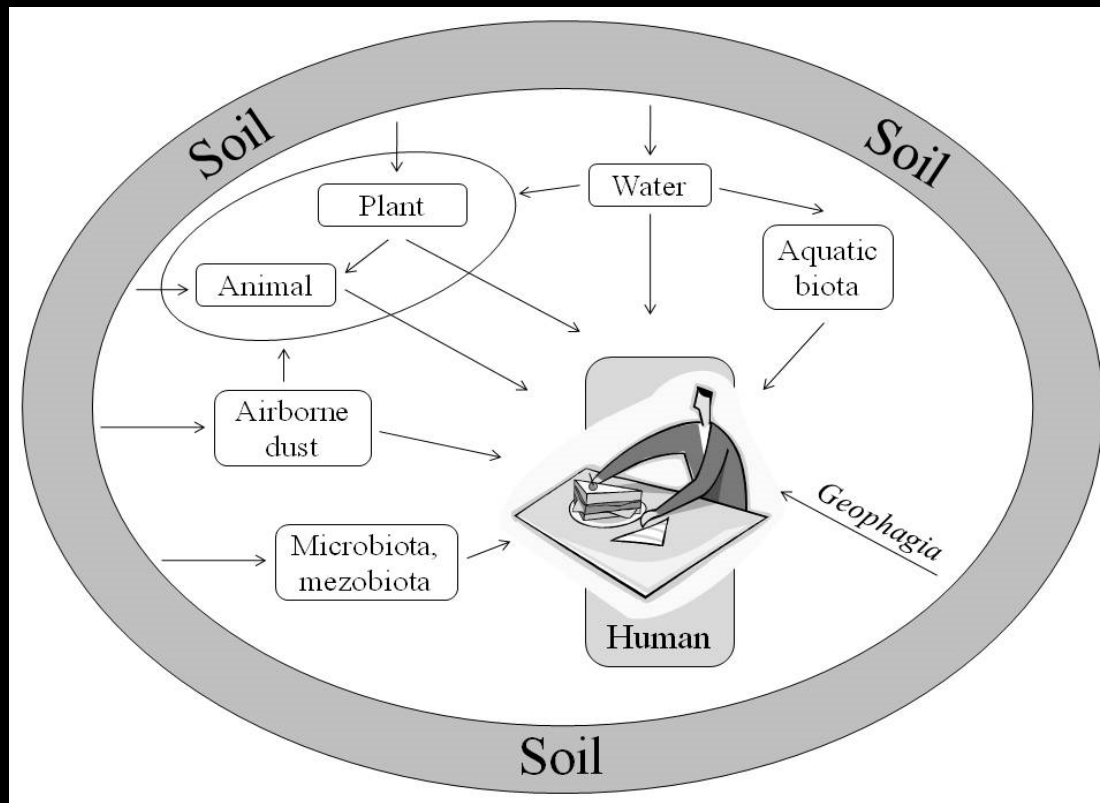

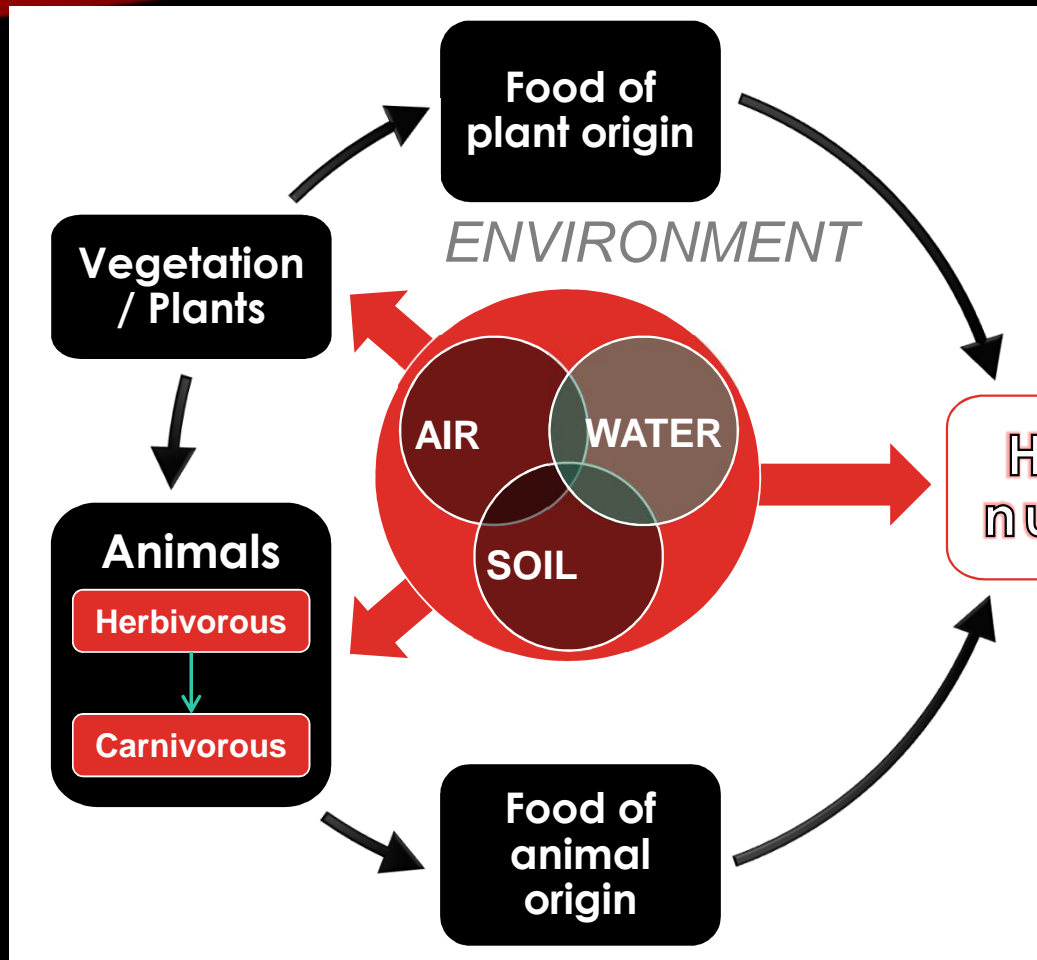

# TOPICALITY

- Food and drinking water are the main sources of chemical elements for biological processes of human body
- Impact of local environmental factors on food composition and food chain – topic of concern
- Major element and trace element assessment – substantially essential vs potentially toxic elements
- How to find the ways to reduce the impact of environmental pollution on food chain

# ELEMENT TRANSFER I

# ELEMENT TRANSFER II

Impacts to be taken into consideration:

- Seasonality
- Origin (e.g., botanical)
- Geographical specifics
- Agricultural practice;
- Processing and/or refinement
- Essential vs. harmful elements

# ELEMENTS OF CONCERN: POTENTIALLY HAZARDOUS & TOXIC ELEMENTS

## (Potentially) Toxic Elements

### Heavy metals:

- cadmium (Cd)
- chromium (Cr)
- cobalt (Co)
- copper (Cu)
- lead (Pb)
- manganese (Mn)
- mercury (Hg)
- nickel (Ni)
- silver (Ag)
- tin (Sn)
- vanadium (V)
- zinc (Zn)

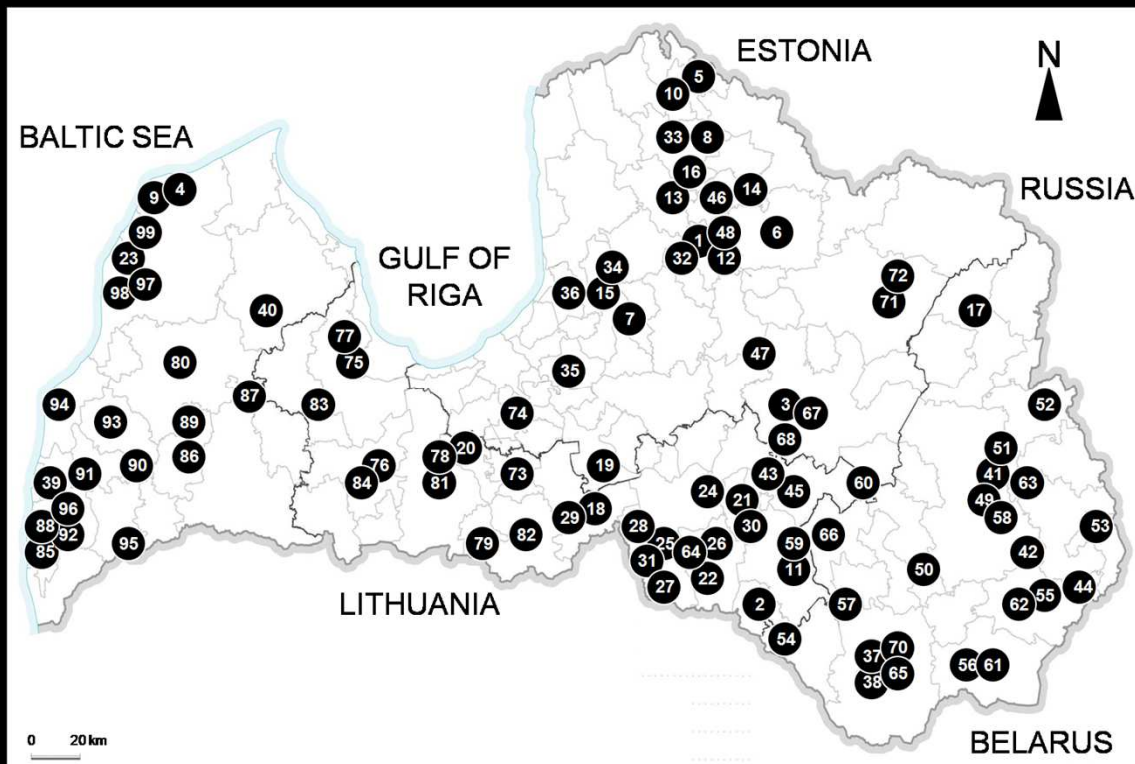

### Lighter metals:

- aluminum (Al)

### Non-metallic toxic elements:

- arsenic (As)
- phosphorus (P)
- selenium (Se)

# LOCAL FOOD RESEARCH IN LATVIA

Various food samples were collected:

- Food of animal origin: bee honey, hen eggs, cottage cheese from cow milk
- Food of plant origin: vegetables (potatoes, carrots, onions), fruits and berries (apples, strawberries, raspberries, black currants)
- Fresh and fermented beverages: apple juice, apple wine, birch sap

# METHODOLOGY & SAMPLE PREPARATION

- Sample pre-treatment:
  - Dry ashing
  - Wet digestion by conc.  $\text{HNO}_3$  + conc.  $\text{H}_2\text{O}_2$
  - Water based acidified solutions
  - Microwave digestion
- Analytical methods:
  - Atomic absorption spectrometry (AAS)
  - Inductively coupled plasma mass spectrometry (ICP-MS)
  - Total reflection X-ray fluorescence spectrometry (TXRF)

# SOME OF RESULTS: CONCENTRATION OF ELEMENTS IN VEGETABLES FROM ALLOTMENT GARDENS

# ASSESSMENT OF ELEMENT BIOAVAILABILITY IN FOOD CHAIN SEGMENT *SOIL-PLANT*

Distribution of  
elements by fractions  
in soil samples of  
vaious types

S1 – fen peat soil  
S2 – sod-podzolic soil / sandy laom  
S3 – sod-podzolic soil / sand  
S4 – sod-podzolic soil / loamy sand  
S5 – sod-podzolic soil / sandy clay loam

# DISTRIBUTION OF ELEMENTS BY FRACTIONS

S1 – fen peat soil (with high content of organic substances)

Distribution of elements by fraction in soil samples

S3 – sod-podzolic soil / sand

# ESTIMATED ASSESSMENT OF ELEMENT BIOAVAILABILITY IN FOOD CHAIN

Distribution of elements by fraction **in lettuce samples**

# SIMPLE OPTIONS FOR FOOD & MEDICAL CROP INVESTIGATION I

- Germination tests influenced by various substances

**Pot marigold**  
(*Calendula officinalis*)

**Cucumber**  
(*Cucumis sativus*)

# OPTIONS FOR FOOD & MEDICAL CROP INVESTIGATION

- Growth tests in hydroponics and substrates at certain conditions

Growth test in hydroponics with wheat and barley using a suspension from biomass ash/water

Growth test with lettuce *Lactuca sativa* in a substrate with certain admixtures

# NEW SOLUTIONS FOR AGRICULTURE & GARDENING

Innovative substrates  
avoiding use of peat

Use of organic waste and  
organic industrial  
byproducts for production  
of substrates

Controlled-release of  
nutrients

Thank You!

The study was elaborated within the scope of the project  
No.1.1.1.2/VIAA/1/16/029 (*Formula of peat-free soil  
conditioner with controlled-release fertilizing effect  
applicable for soil remediation and quality improvement of  
agricultural production*)
